# HL-12370dw series login password

Your Brother machine's default password for use configuring network settings, performing a firmware update, accessing BRAdmin, accessing Web Based Management, or accessing Remote Setup is as follows: - initpass - access - Some machines will have it listed on a label on the back or bottom next to Pwd: Example of a password label For machines with a password label, the default password is 8 characters long and may contain special characters. If the password begins with a colon or other special character be sure to include it as part of the password. If your machine does not have a password label, try one of the other possible default passwords. For some machines, the default password may also be located on the bottom of the Network Configuration page. This may be easier to read than the label on the machine, where applicable. Click here and then select your model's category and model number for instructions on how to print the Network Configuration or User Settings report. If you've created a custom password for your Brother machine's settings, and have forgotten the password, you'll have to reset the network card to factory default to regain access to these settings. We cannot help you recover a lost password. Click here and then select your model's category and model number for instructions on how to reset the Network Card to the factory default settings.
